

GMO ASSURANCE STATEMENT

Tamar Organics is a 100% Organic, Soil Association registered seed wholesaler in the U.K.

We participate in the Genetic Modification Inspectorate: seed audit programme in the UK.

As a supplier we want all our customers to know we have specific controls/procedures in place to ensure the risk of adventitious GM presence is minimised.

Under Soil Association guidelines everything on our premises has been checked at various stages to ensure the seeds are organic and have no GM presences, every item is recorded in detail, lot numbers, organic certifiers and passports which can be passed on where required and each seed lot is fully traceable. If there is any doubt regarding organic certification for a seed lot, it is never opened and it is returned to the supplier, this is done so we can maintain the organic integrity of the seed and can, never knowingly, pass on the risk of a GM presence to any of our customers.

In addition, we ask each of our suppliers what procedures/protocols they have in place to reduce the risk of adventitious GM presence.

We are committed to providing Organic seeds to our customers. We do not and never will offer genetically modified seed.
